

Customer Centric Supply Chain Planning

Build Strength and Precision with ICRON Production & Capacity

Production and capacity decisions are pivotal to supply chains, with the potential to directly influence a company's ability to meet customer demand, control costs, and maintain its competitive edge. By leveraging ICRON Production and Capacity, businesses can enhance supply chain planning and ensure firm control over wastage and operational costs.

The exclusive features that set ICRON Production & Capacity apart are:

- Data-driven insights for informed decision-making in mid and long-term production and capacity plans.
- Flexible and multi-objective optimization to manage your capacity plan with all resource and BOM alternatives.
- Comprehensive supply chain resource planning approach for renewable, consumable, and complex resources.
- All-inclusive material requirement planning with optimal BOM selection.

Benefits

10% improvement in overall equipment effectiveness (OEE)

15% reduction in operational costs

20% reduction in backorders

30% reduction in overtime

Why is ICRON Production & Capacity Key to Business Success & Growth?

Structured Decision-Making

- Leverage high-level analytics and intelligent workflows for speed and accuracy in production decisions.
- Overcome supply chain integration challenges with data-driven insights and unparalleled visibility.

Enhanced Capacity & Resource Planning

- Optimize resource allocation with relevant metrics for better capacity management.
- Access resource utilization data, to know the total utilized capacity, regular and over-time usages, and all relevant metrics for enhanced capacity management.

Boost Customer Satisfaction

- Gain end-to-end visibility of order progress to facilitate production plans.
- Boost order satisfaction by balancing demand, resource utilization, and inventory levels.
- Track and seize opportunities in the production and capacity allocation decisions.
